

CHEFBOT

WATCH LESS, COOK MORE

PRESENTED BY

LAMA ALWUTHAYNANI & RENAD ASIRI

WHAT IS CHEFBOT?

Chefbot Multimodal Cooking Assistant

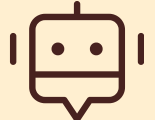

ChefBot is a smart assistant that helps you get the most out of YouTube recipe videos. Using speech-to-text technology and AI, ChefBot makes cooking easier and more accessible, including for the deaf. It provides:

Text-based recipe guidance for the deaf

Why ChatBot

-  YouTube is a primary resource for cooking tutorials
-  Long videos often make it difficult to locate specific steps
-  Written recipes are frequently incomplete or unclear
-  ChefBot addresses these challenges by transforming transcripts into interactive, searchable content

SOLUTION OVERVIEW

CHEFBOT LETS USERS:

Paste a YouTube URL 🍴

? Ask any question about the recipe

Get friendly chef-style answers instantly

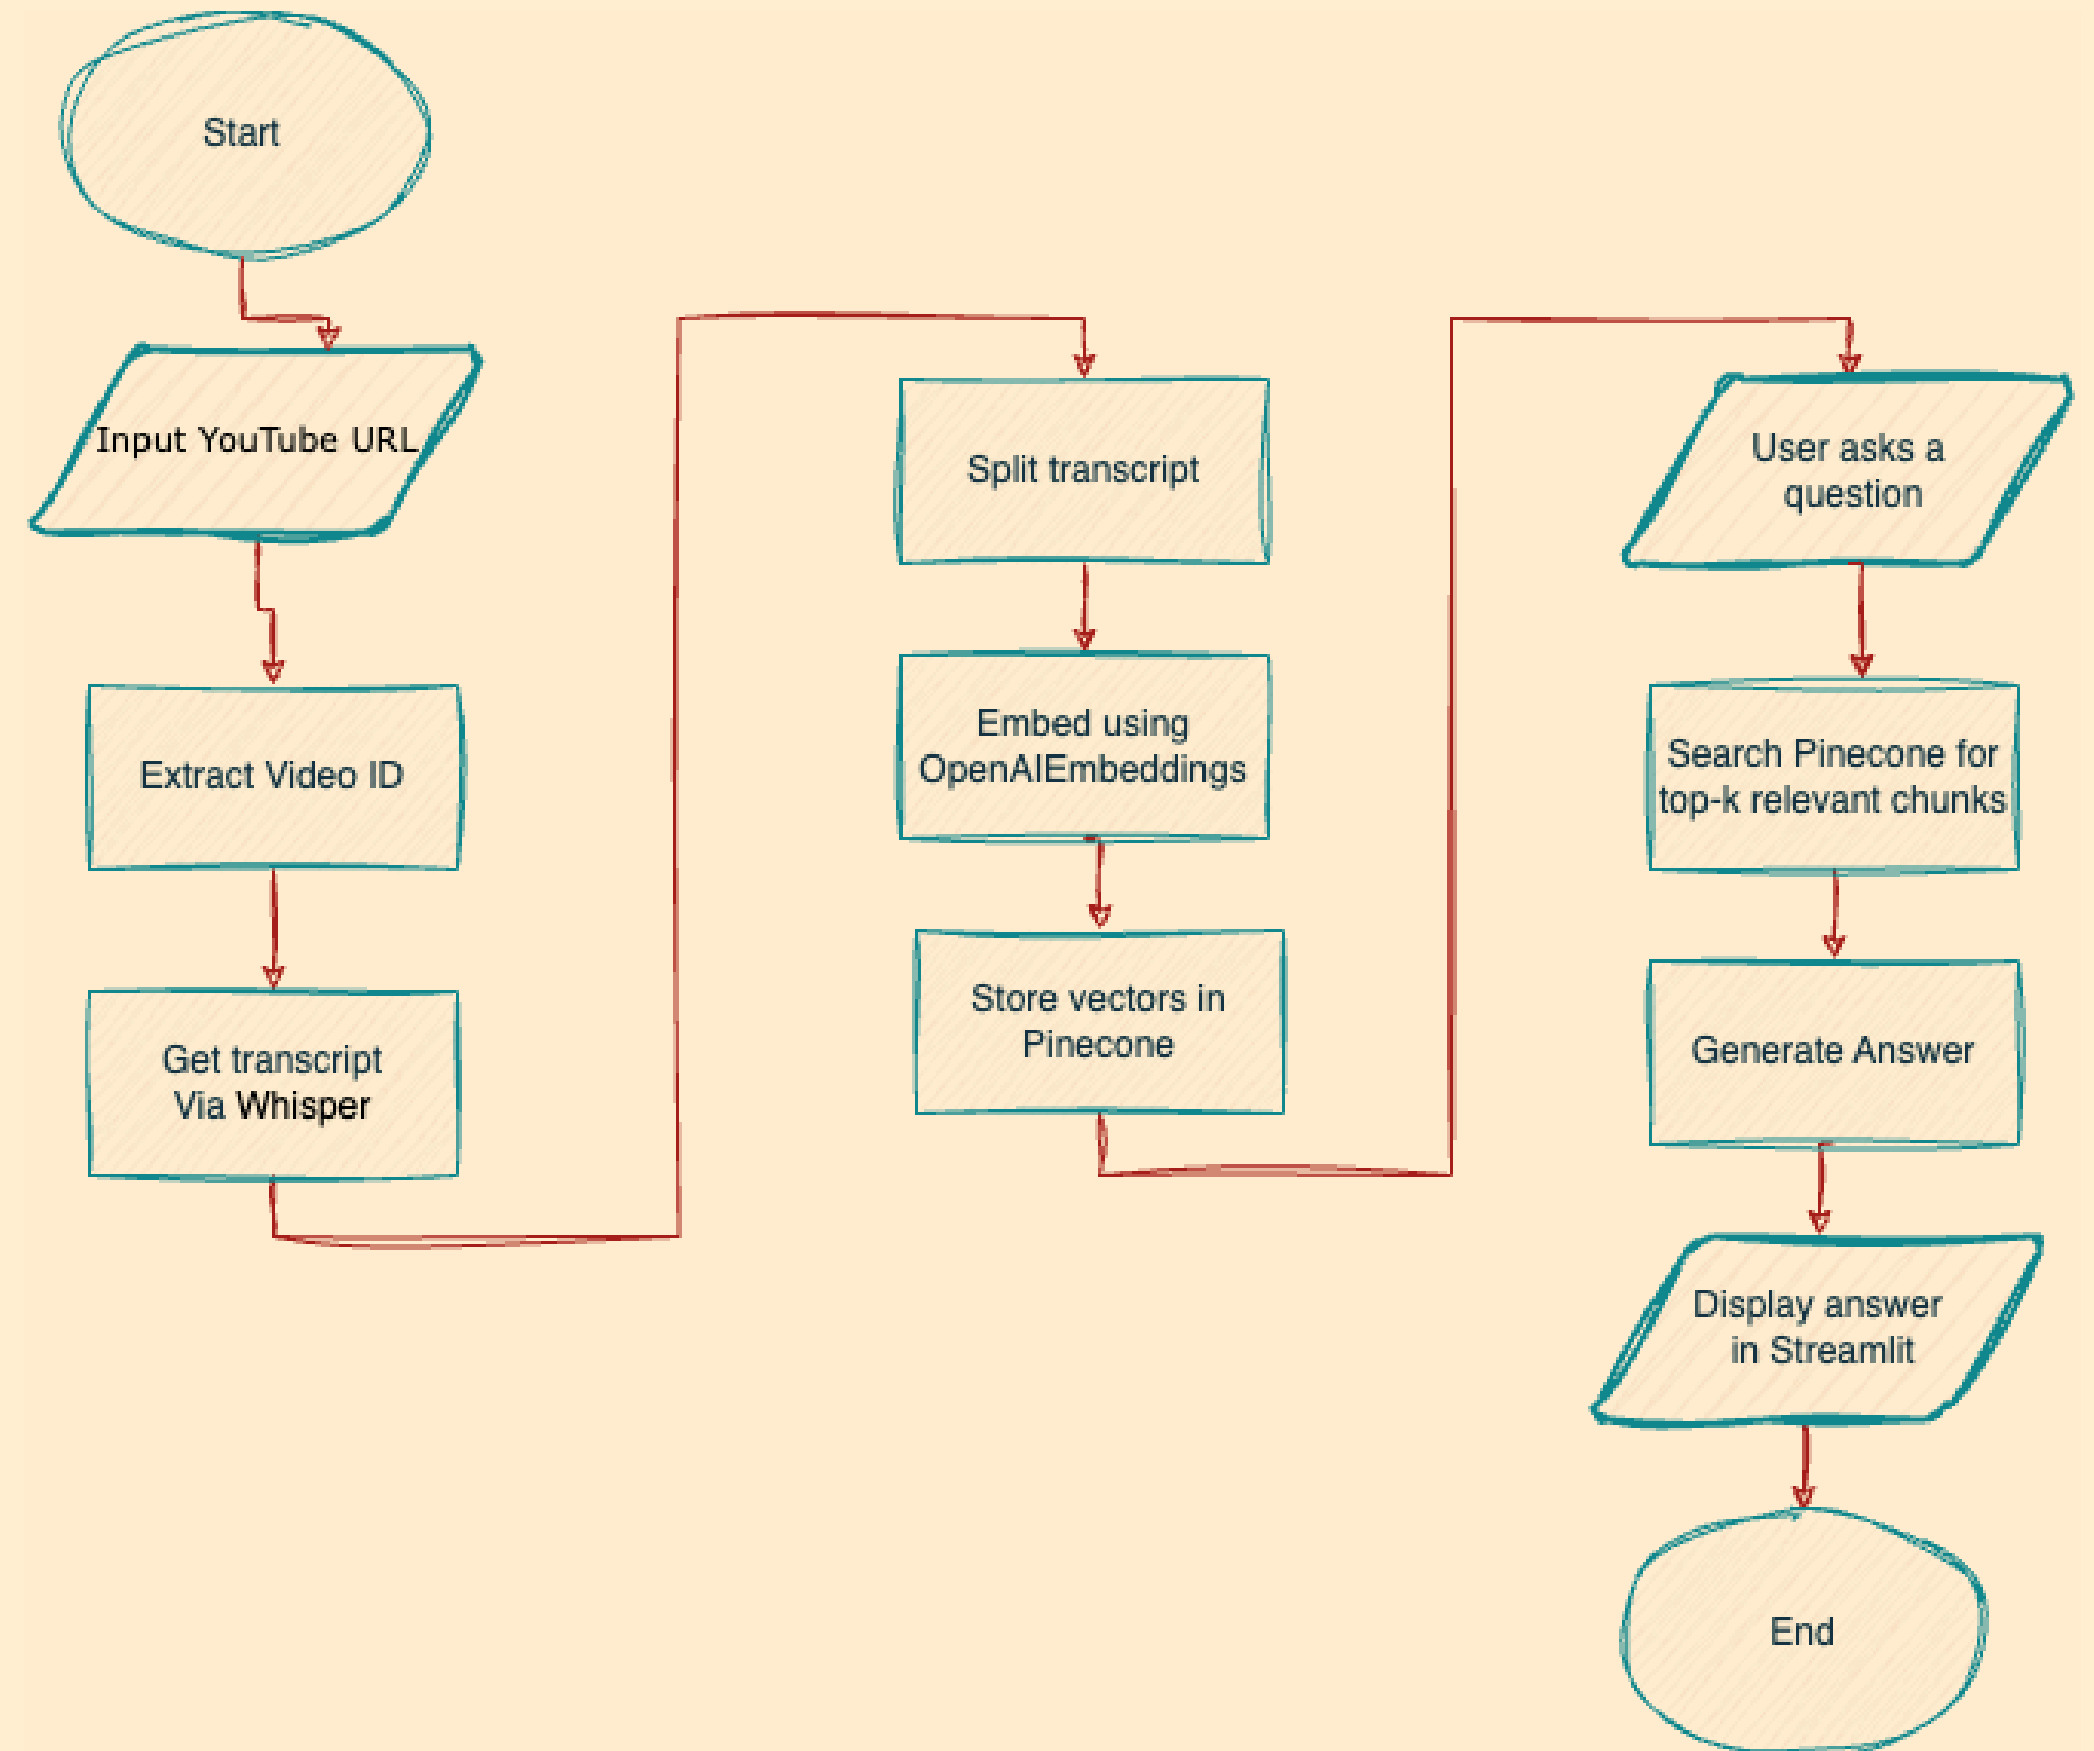

Auto-generate shopping lists 🛒

Convert units (cups ↔ grams)

Handles English + Arabic

SYSTEM ARCHITECTURE

Key Technologies

Speech-to-text

Whisper (OpenAI) → Transcribe video audio

Language Detection

langdetect → Multilingual support

Text Embedding

OpenAI Embeddings → Convert text → vectors

Web UI

Streamlit → User interaction

Vector DB

Pinecone → Store & retrieve transcript chunks

QA Model

GPT-3.5 → Chef-style answers

RAG Pipeline

Query → User asks a question

Retrieve → Top-k chunks from Pinecone

Rerank → Based on similarity

Augment → Add context to prompt

Generate → Friendly chef-style answer

KEY FEATURES

- QUESTION ANSWERING BASED ON TRANSCRIPTS

- INGREDIENT EXTRACTION FOR SHOPPING LIST

- UNIT CONVERSION (CUPS → ML, ETC.)

- FRIENDLY MULTILINGUAL ANSWERS WITH EMOJIS

Challenges & Solutions

- Problem: YouTube transcripts are often full of casual speech, grammar mistakes, and missing punctuation.
- Solution: We split the transcript into small chunks using LangChain, which made it easier for the AI to read and understand.

Challenges & Solutions

Difficulty identifying the recipe name

- Problem: Some videos don't clearly say what recipe they are making.
- Solution: We used patterns like "how to make..." or "today we're cooking..." to guess the recipe name

Challenges & Solutions

User questions in different languages

- Problem: Not all users ask questions in English.
- Solution: We used a language detection tool to find the user's language and asked the AI to reply in the same language.

EVALUATION

1. EVALUATION SETUP

We used LangSmith to test the model.

A small test dataset called `recipe_qa_dataset_v3` was created with 3 examples.

Each example had: a question, a YouTube video URL, and the expected answer.

Sample questions:

"What is the ingredient for the recipe?"

"How long and at what temperature should I bake the pie?"

The goal was to check if the model could find and generate correct answers using RAG.

2. EVALUATION METRICS

We ran three rounds of evaluation using GPT-4:

Is the answer present?

Tool: `is_answered`

Result: All answers were meaningful and relevant (score: 1)

Is the answer correct?

Tool: `answer_correctness`

Result: All answers were factually correct and matched the expected answers (score: 1)

GPT-4 also generated explanations for each answer

About ChefBot 🤖

- Smart kitchen assistant using AI & video transcripts.
- Ask about ingredients, steps, or any cooking topic.

📖 How to Use

1. Paste a YouTube cooking video link.
2. Click Process Video.
3. Ask anything cooking-related!

No video? No problem — just ask general cooking questions!

Deploy

ChefBot 🧑🍳🤖

Analyze cooking videos or ask general culinary questions!

🔗 Enter YouTube URL (optional)

https://www.youtube.com/watch?v=...

🎬 Process Video

Ask ChefBot a Question 🗣️

🗣️ Your Question

كيف اطبخ ر

Press Enter to apply

? Ask

CONCLUSION

- ChefBot combines NLP, search, and AI to make cooking easier
- It turns passive videos into interactive assistants
- Practical use of LangChain, RAG, and Pinecone
 - A great step toward AI in everyday life

THANK YOU!
FOR LISTENING
